# NANOSIL G

## Self-cleaning Silicone Smooth Render

NANOSIL is a thin-coat high quality render, whose key components are made in accordance with the latest discoveries in nanotechnologies. Due to a high level of silicone binders and siloxane additives, façade surfaces treated with NANOSIL are more resistant to dust, soot and dirt. Self-cleaning effect is therefore achieved on places exposed to precipitation. The render adheres well to all types of fine-coarse construction surfaces and base renders of façade thermal insulating systems.

### NANOSIL ensures:

- High and sustainable water repellence;
- Self-cleaning effect on façade surfaces;
- High film persistence on façade surfaces;
- High resistance to effects of smoke, UV rays and other atmospheric factors;
- Long-term resistance to algae and mildew;
- Suitable for tall buildings, which have no or minimum projecting roofs;
- Suitable for environments, where pollution is present due to traffic and industry (city centres, industrial zones);
- Available in granulations of 1.5 / 2.0 mm;
- Long open periods for application to façade surfaces;
- Easy application.

NANOSIL is available in a wide range of colour shades:

- 78 shades from the JUB colour chart, shades ending in 4 and 5;
- Delivery in shades designed at a special request of the customer is possible under certain conditions.

NANOSIL is a superior quality product which, in the construction field, constitutes a step forward in the direction of material formulation on the basis of nano-structures.
